

reviewerforrose

**Rose Model Review
Technology that Speeds
Design, Provides Ongoing
Training and Mentoring**

**Reviewer for Rose™ is a
powerful design reviewer.
Reviewer for Rose includes:**

- *Over 80 configurable UML design reviews to choose from*
- *Standard Browser look and feel*
- *Management and Designer summary reports*
- *Proof of design-time deliverables*
- *Detailed design reports outlining errors, consequences of not fixing them and proposed solutions, providing active mentoring*
- *Automated HTML generation of organizations design standards*

HOW DO YOU QUICKLY ENSURE THE QUALITY OF YOUR DESIGNS, SPEEDING DELIVERY OF BUSINESS CRITICAL IT APPLICATIONS?

Your business depends upon fast and efficient application development. Quality applications delivered on time and to budget, that meet the needs of your business.

How can you:

- Understand the quality of your designs, before moving to construction?
- Reduce the time you spend mentoring your design staff?
- Gain consistency between designs and designers?
- Document and communicate your design standards?
- Reduce your effort and design time by up to 20%?

APPLICATION DESIGN REVIEW: A NEW WAVE

Reviewer for Rose is the world's first automated UML design review tool. It reviews standards, accuracy, completeness, style, based upon designs within Rose. Finding problems early has exponential savings later on, but sometimes it is hard to justify the effort. Reviewer typically reduces design reviews from days to seconds, giving you the advantage of early design review, without the previously unacceptable cost. Reviewer for Rose:

- Provides a set of highly configurable reviews, grouped into seven general topics
- Focuses on rose.MDL Files
- Gives you management information about any design deficiencies
- Reports detailed errors and warnings, making it the "spell-checker" for design
- Describes any errors, the consequences of not correcting them and design patterns for correction
- Documents the reviews you have configured as HTML to provide your organization with design standards

These features make Reviewer for Rose invaluable for all project managers and designers. Managers no longer have to estimate design status. Designers have continuous mentoring, support and can accelerate design improvements.

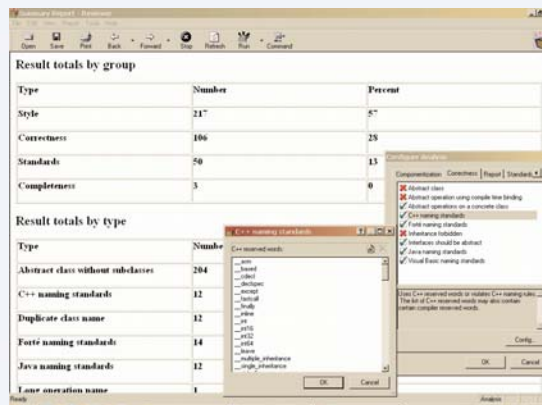

EASY TO USE. ENSURES QUALITY RESULTS.

Reviewer for Rose has a web browser interface making it easy to use. Large models take seconds to review rather than days and the results are as easy to navigate as the Internet. No prior knowledge of Rose is required. Configuring design reviews is as easy as selecting check boxes. For example, you can select configuration options to:

- Ensure classes, attributes and operations have descriptions and data-types
- Check for any Java, C++, VB or Forte "key words" in your designs
- Identify multiple inheritance and cyclic dependencies, giving you a real understanding of how well prepared you are to move into the construction phase

LEVERAGE DESIGN REVIEW THROUGHOUT THE ENTERPRISE

For designers, mentoring is clear and concise, while deep enough to ensure any problem can be fixed. You can even hot-link to the Select Business Solutions™ website for the very latest design tips and useful Reviewer links. Built as a team and enterprise scale tool from the start, Reviewer for Rose can focus on one designer's area of responsibility while at the same time enable review communication throughout the enterprise with sophisticated information sharing technology.

Reviewer for Rose gives you everything you need to measure the quality of your designs, identify design faults and fix them, quickly and easily.

To find out more about how Reviewer for Rose can help you improve the quality of your Rose models and dramatically reduce the time you spend on design visit www.selectbs.com or contact us with one of the following numbers.
