

Select VBSync

Model and Code Synchronization for Microsoft Visual Studio .NET Microsoft Visual Basic (VB) Applications, Accelerating Enterprise Scale Application Development

Select VBSync™ provides all the roundtrip engineering features you need to synchronize UML models and Microsoft VB programs. It runs directly within Microsoft Visual Studio.NET, accessing Select's multi-user UML repository, providing unparalleled levels of performance, whatever the model size, from one to hundreds of users.

- Develop and implement enterprise-scale Microsoft VB applications in less time
- Browse UML designs and Requirements as you develop right within Microsoft Visual Studio.NET
- Visually difference model and code
- Selectively synchronize your UML Models directly with Microsoft VB code, within Microsoft Visual Studio.NET
- Use sophisticated reverse engineering to clarify complex designs for undocumented applications
- Optimize programmer time, achieve greater project control

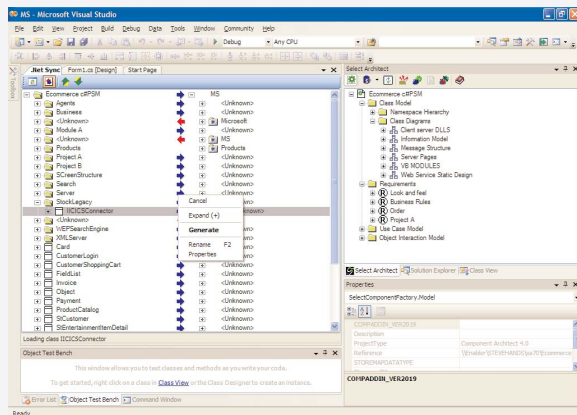

EFFECTIVE APPLICATION DEVELOPMENT HAS NEVER BEEN MORE IMPORTANT

As the speed of business continues to accelerate, you need to employ fast, efficient application development techniques. You need to deliver high quality applications faster than ever. Expand your markets. Serve customers more efficiently and gain new cost efficiencies. To meet these challenges, many IT organizations are turning to component-based development and .NET to speed the delivery of new applications. But how can you ensure your Microsoft VB applications meet your specific business needs? Or that they can be modified easily as your business changes? How can you:

- Easily generate code without compromising quality?
- Synchronize your Microsoft VB application to update or create UML models?
- Document your Microsoft VB application without dedicating a great deal of time and resources?
- Support a single development team or multiple teams working in different offices around the globe?

DELIVER ENTERPRISE-SCALE MICROSOFT VB APPLICATIONS FINELY TUNED TO MEET YOUR BUSINESS NEEDS

Select VBSync is a market leading round-trip engineering tool that generates reverse engineering and synchronization of Microsoft Visual Basic code. Using UML designs within Select Architect™, Select VBSync speeds development by delivering your designs in "first cut" Microsoft VB code. It ensures your application design and model are synchronized- and immediately ready to support ongoing development, maintenance, enhancement and integrations tasks. These features ensure your Microsoft VB applications meet the ever changing needs of your business.

EVOLVE MODEL AND CODE IN PARALLEL, WITH VISUAL DIFFERENCING AND SELECTIVE SYNCHRONIZATION

Your model and code can evolve in parallel with simultaneous changes reconciled through visual differencing, selective synchronization and round-trip engineering. Select VBSync clarifies complex designs and allows you to drill down into your area of interest for both models and Microsoft VB code. It translates Select Architect descriptions to and from Microsoft VB comments. Select VBSync runs directly within Microsoft Visual Studio.NET giving you unparalleled levels of performance and iterative development support. This deep integration dramatically increases developer productivity.

FAST AND FLEXIBLE APPLICATION DEVELOPMENT

Select VBSync is designed for small and large-scale, distributed systems development. It provides integrated business process and systems modeling, multi-tier architecture generation and application development process support. Its superior integration allows direct mapping of objects and components modeled in Select Architect to the .NET environment, as well as seamless and iterative Microsoft VB code generation.

Whether modeling UML classes in Select Architect or using existing Microsoft VB code, Select VBSync is the most efficient tool for building successful solutions and extensions to your applications. Select VBSync allows you to invest in design once. It keeps your design current and ready to use for future projects with the same or different technology.

In its own right, Select VBSync is an incredibly powerful Microsoft VB round-trip engineering tool set. As part of Select Solution Factory™, Select VBSync and Select Architect become key facilities for realizing all the benefits of service and component-based development - "the next wave" in application development.

About Company

Select Business Solutions' Application Development Solutions business unit builds and supplies market leading Process, Visual Modeling and Application and Development Tools. Our offerings provide comprehensive and innovative solutions for our customers to gain technological competitive advantage in areas such as CMMI, MDA, SOA, Microsoft.NET and Eclipse.

Select prides itself on its exceptional customer retention and satisfaction, working closely with customers and analysts to deliver award winning products and processes. Our mission is to enable our customers to deliver the right IT solutions for their businesses on time and to budget, without overcomplicating or enforcing technology lock-in.

Our tools are successfully implemented in thousands of organizations throughout all the major industries including finance, retail, telecommunications, distribution and government. Select is an Avantcé Company, (www.avantce.com) headquartered in Trumbull, Connecticut. Select operates sales offices throughout North America and Europe, in addition to a network of international distributors.
